REASONS FOR ALLOWANCE

1. The following is an examiner's statement of reasons for allowance: ✓

Claims 1-6 are allowed, as the prior art of record does not teach or suggest a method for designing apparatus for use in a magnetic resonance system for receiving a magnetic resonance signal having a predetermined radiofrequency, said apparatus and said magnetic resonance system having a common longitudinal axis, said method comprising designing the apparatus by treating the apparatus as a transmitter of a radio frequency field having the predetermined radio frequency and then designing said transmitter by calculating locations on the specified cylindrical surface for the set of inductive elements by contouring the function $n \cdot S$, in combination with the remaining limitations of the claims.

Claims 7-12 are allowed, as the prior art of record does not teach or suggest a method for designing apparatus for use in a magnetic resonance system for transmitting a radio frequency field or both transmitting a radio frequency field and receiving a magnetic resonance signal, said apparatus and said magnetic resonance system having a common longitudinal axis, the method including step of calculating locations on the specified cylindrical surface for the set of inductive elements by contouring the function $n \cdot S$, in combination with the remaining limitations of the claims.

Claims 13-21 are allowed, as the prior art of record does not teach or suggest a method for designing apparatus for use in magnetic resonance system for receiving a magnetic resonance signal having a predetermined radio frequency, said apparatus and said magnetic resonance system having a common longitudinal axis, said method

Art Unit: 2859

comprising designing the apparatus by treating the apparatus as a transmitter of a radio frequency field having the predetermined radio frequency and then designing said transmitter by converting the complex current density function into a set of capacitive elements located on the specified cylindrical surface and a set of inductive elements located on the specified cylindrical surface, in combination with the remaining limitations of the claims.

Claims 22-30 are allowed, as the prior art of record does not teach or suggest a method for designing apparatus for use in a magnetic resonance system for transmitting a radio frequency field or both transmitting a radio frequency field receiving a magnetic resonance signal, said apparatus and said apparatus and said magnetic resonance system having a common longitudinal axis, the method having step of converting the first and second complex current density functions into sets of capacitive elements and sets of inductive elements located on the specified cylindrical surface, in combination with the remaining limitations of the claims.

Claims 31-33 are allowed, as the prior art of record does not teach or suggest method for converting a complex current density function J into sets of capacitive and inductive elements located on a cylindrical surface, including calculating locations on the cylindrical surface for the set of inductive elements by contouring the function $n \cdot S$, in combination with the remaining limitations of the claims.

2. Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably

Art Unit: 2859

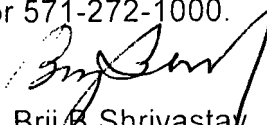

accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

3. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Brij B. Shrivastav whose telephone number is 571-272-2250. The examiner can normally be reached on 7 AM to 4 PM.
